

MARKANT OFFICE FURNITURE

MARKANT DELTA

Delta is the most versatile of all the Markant furniture programmes. The design is sober, without frills. The unique click leg mechanism is one of many innovative Delta features. A press of the foot is all that is needed to set the desktop to the desired working height.

CONCEPT

For the Delta, Markant combines all the knowledge and experience gained from her previous furniture programmes. The resulting design is distinctive for its efficient use of materials, ingenious click mechanism and attention to detail. Delta was designed according to the modular concept of Markant System Architecture (MSA), so that components from different programmes can be interchanged at will.

VERSATILE

Delta is designed in such a way that a wide variety of workplaces and conference rooms can be constructed using a very small number of components. Markant thereby brings an extremely price-conscious range of furniture to the market, furniture that uses raw materials in a sustainable way. In this programme the entire ergonomic spectrum is covered by just three concepts: 'adjustable', 'movable' and 'sit/stand'. All mechanisms are available with T-leg and C-leg.

DESIGN

The Delta lines have deliberately been kept sober. The Delta merges into the surrounding environment like a chameleon, so that it is suitable for use in virtually any type of organisation.

ERGONOMICS

Markant is one of the few furniture manufacturers to develop a sit/stand model in her standard workstation line. Naturally Delta also complies with all the ergonomic requirements of the Delft Standardisation Institute, and has been fully tested in accordance with NEN 2449: 2006 NL and NEN EN 527. Delta is adjustable in height from 62 - 85 cm. The standard model deploys our unique click mechanism, but we also offer continuously adjustable models with manual winder mechanism or touch-control electromotor.

MADE TO LAST

The durable character of Delta is typified in the modular construction and timeless design of her furniture. If you want to give your office a completely new look, all you have to do is renew the tabletop and/or support. There is no need to replace the existing frame.

LOW MAINTENANCE

A perfect finish and smooth lines mean that Delta furniture is very easy to keep clean. The Markant Delta programme is all low maintenance.

INDIVIDUAL

Individuality goes further than the height of the desktop. The numerous options provided by Delta not only allow you to fulfil your corporate wishes and requirements, but also those of the individual employee. Useful accessories such as partitions and trays can be used to give the workplace an even more personal touch.

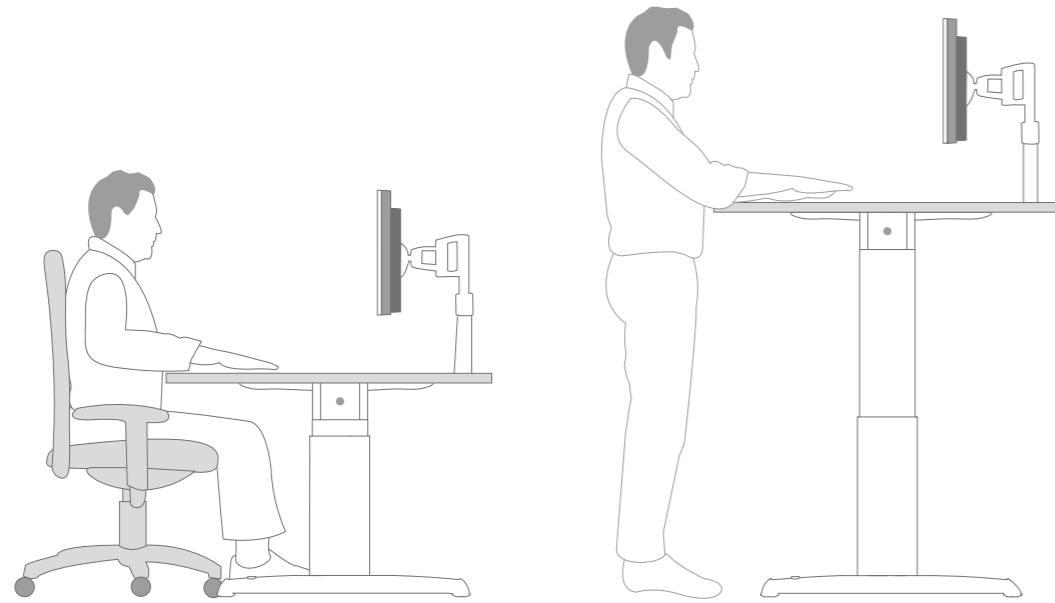

C AND T

The Delta tables can be supplied with a C- or T-leg. If required, additional support legs can provide extra stability, without limiting the user's freedom of movement.

UTILITY FEATURES

The Delta programme is extremely easy to assemble, adjust and convert. A change of user presents no problems whatsoever. A press of the foot on the rust-resistant steel button in the leg is all that is needed to adjust the desktop height, with no tools required.

DELTA SIT/STAND

Sit/stand workstations are generally purchased for personnel who spend many hours working at the computer, or who have back, neck and shoulder complaints.

But sit / stand workstations should really be deployed much more often than this. Preventive deployment for the benefit of all personnel will undoubtedly reduce levels of absenteeism due to back, neck and shoulder problems. The possibility of working in alternately sitting and standing positions will also contribute to greater vitality in the workplace, thus raising levels of concentration and productivity. Your investment in a sit / stand workstation will soon pay for itself!

DELTA CLICK

This support system is adjustable in height. The adjustability range is 62 - 85 cm in compliance with NEN 2449: 2006 NL and NEN EN 527. Delta is adjustable in steps of 1 cm using a foot-operated pushbutton. The set desktop height is displayed on the leg. Delta Click is available in C-leg or T-leg versions.

DELTA SYNCHRO MANUAL

This support system is continuously adjustable in height using a manual winder. The winder is located at the side or front of the workstation. Adjustability range 62 - 85 cm in compliance with NEN 2449: 2006 NL and NEN EN 527. Delta Synchro Manual is available in C-leg or T-leg versions.

DELTA SYNCHRO ELECTRO

This support system is continuously adjustable in height using an electromotor. The height can be read off on the display at the front edge of the desktop. Four positions can be programmed into the system memory. Adjustability range 62 - 85 cm in compliance with NEN 2449: 2006 NL and NEN EN 527. Delta Synchro Electro is available in C-leg or T-leg versions.

FORMS

Tops and the accompanying frames are available in a wide range of sizes in accordance with the standard module dimensions. For more possibilities, have a look at our Markant Interiors brochure.

TOP MATERIALS AND FINISHES

The tops can be supplied in melamine coated chipboard, in HPL, postformed or solid core, in a wide variety of finishes. With Delta, creating the desired atmosphere is easy. For more possibilities, have a look at our Markant Interiors brochure.

LACQUER AND TOP COLOURS

Not only are the tops available in a variety of colours and timber designs, the furniture lacquer colours are also available in various neutral colours. All metal and aluminium components are powder coated to guarantee durable protection. For more possibilities, have a look at our Markant Interiors brochure.
